

GOLD CARE

For the changing face of care

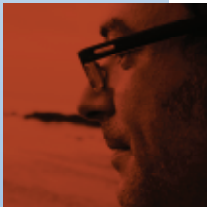

Achieve New Levels of Assessment Efficiency and Ease with GoldCare

GoldCare's Assessment Information Manager (AIM) provides you with a convenient and streamlined method to electronically complete and submit interRAI and other assessments. You can use resulting assessment protocols, outcomes and quality indicators to monitor client status and track trends. This information will give you a conclusive analysis of client care and the ability to benchmark your organization.

“

With the AIM program, the sky's the limit. If you can dream up an assessment or an intake form, GoldCare is capable of handling the input of that data and will use an HTML report to provide an output.

Integrated interRAI Instruments for Accurate and Standardized Assessments

- **Certified RAI Tools:** Developed in consultation with, and licensed by interRAI, GoldCare's AIM tool is designed to support the full suite of RAI instruments and applications. GoldCare features built-in calculators and quality checks to help you maintain data validity, and ensure compliance with interRAI standards. GoldCare is committed to providing you with new versions of RAI tools once they're released by interRAI.
- **Convenient Data Collection:** GoldCare's AIM application increases the accuracy, speed and consistency of completing, updating and submitting assessments. AIM enables you to concurrently track multiple assessments: in-progress assessments, completed assessments, overdue assessments and more. All assessment information is accessible from a single screen, and sections can be completed in the order you choose.
- **Conclusive Quality Indicators:** AIM uses standardized quality indicators developed by interRAI. Quality indicators are generated based on particular responses or combinations of responses to questions in the completed assessment. You can use quality indicators to objectively evaluate service quality and identify areas that require further organizational development.
- **Immediate Outcome Scores:** AIM automatically calculates an outcome score once an assessment has been completed, saving you time and reducing calculation errors. You'll gain valuable information about clients that you can use to develop their care plans, as well as measure their care progress. You can even use outcomes collectively to track care trends and identify commonalities among your client population.
- **Intelligent Assessment Protocols:** AIM provides you with full documentation on what assessment responses triggered the APs and a list of other factors to consider if a specific AP is triggered. Once APs are calculated you can generate AP reports for the client and create care plans and progress notes. Assessment protocols give you a problem-oriented framework for additional assessment and care planning.

How AIM Processes Assessments

Convenience and Clarity come Standard with these Built-in Help Features

- **Automated Care Plans:** GoldCare's integrated Care Plan Builder creates suggested care plans for the client based on data from the completed assessment. This process occurs automatically whenever an assessment protocol is triggered, saving you time. You simply review the suggested care plans and individualize them as required.
- **Intuitive Web-based Design:** AIM's integrated web interface allows you to navigate among pages with ease. This enables quick and consistent data entry, which in turn increases inter-rater reliability. There are no papers to shuffle or difficult codes to remember. All the information you need to complete or update assessments can be readily found in one centralized repository.
- **Accessible Online Help:** AIM's built-in help features alleviate the guess-work and complexity of completing assessments. Hover-help (which opens a small help window), links to external documentation and auto-generated dictionary items provide you with the knowledge needed to complete assessments in a way that's clear and accurate.
- **Valuable Quality Checks:** AIM includes numerous quality checks to reduce data entry errors and guarantee consistency across the entire assessment. These checks can be as simple as verifying that all questions have been answered, to complex co-dependence checks among multiple responses. Error reports are generated to call your attention to assessments that require corrections.

Benefit from our Collaborative Relationship with interRAI

We consult closely with interRAI members to develop assessment systems that support and progress evidence-based healthcare practices. Our versatile solutions and dedication to healthcare advancement are just some of the reasons why more than 150 healthcare organisations across Canada, the United States, Australia and New Zealand have selected GoldCare for their healthcare technology needs.

Contact us today to learn how GoldCare will help your organization streamline the assessment process.
